COVID-19 Convalescent Plasma Guidance

April 8, 2020

Background

Although promising, convalescent plasma has not yet been shown to be effective in COVID-19. However, the FDA has made this treatment available under conditions as outlined in the Revised Information for Investigational COVID-19 Convalescent Plasma available on the FDA website.

Recommendations & Rationale

- Providers interested in using Convalescent Plasma for the treatment of an individual patient should follow the FDA guidance as outlined on the FDA website.

- Providers should coordinate with their local Red Cross as directed by the FDA to identify pheresis donor candidates for Convalescent Plasma.
