Mercy Medical Center – Centerville updated its Community Health Needs Assessment (CHNA) in March 2016. The CHNA is designed to reach broadly into the community to identify needs, gaps and barriers to health and health services. In order to address needs identified in the CHNA, Mercy Medical Center – Centerville will work as an organization and in conjunction with key community partners to continue implementing strategies across the service area.

Acknowledging the many organizations and resources in place to address the health needs of the community, Mercy has strategically reviewed the internal and external resources. This implementation strategy will explain how Mercy will address the prioritized findings by continuing existing programs and services, and by initiating new strategies. In addition, this document will explain reasons why Mercy will not address all needs identified within the CHNA, but will continue to support other organizations already addressing these needs.

The identified areas of community health need will be addressed in Mercy’s implementation strategy for FY2016 through FY2019, after which the next Community Health Needs Assessment will be performed.

Community Health Needs Assessment Available to the Community

The CHNA is disseminated to the community via the Mercy website at: www.mercycenterville.org and printed copies are available upon request of Mercy.
**Priority Area 1: After Hours/Urgent Care Clinic Availability** – The community health needs assessment through both the survey and town hall meeting overwhelmingly identified the need to access physician services beyond Monday – Friday, 8-5. Respondents identified difficulty getting same day appointments with physicians and/or mid-level practitioners and don’t want to use the emergency room for non-emergent conditions.

| Improve the access of area citizens to primary care services. | Expand hours in current clinic to accommodate weekday after hours and weekend hours | Residents of all ages – infants through seniors | • Assess current clinic occupancy space  
• Develop a business plan to estimate volumes and staffing needs. | April 2016 | Hospital Administration | |
| | | | • Recruit 3 mid-level providers | By October 2016 | | Recruitment – 100 hours  
Administrator/provider $29,000  
3 Provider Salaries/Benef. $375,000 |
| | | | • Develop operational processes & procedures | By November 2016 | Clinic Administrator | Clinic Administrator Time 50 hours $2,000  
Purchase 2 high low exam tables $8,600 |
| | | | • Market opening of walk-in clinic with expanded hours | December 2016 | Clinic Administrator  
Mercy PR | Design/Print/Advertising/Signage $10,000 |
| | | | • Open walk-in clinic | January 2017 | | |
**Priority Area 2:**  
**Increase the physician specialist clinics locally** - The CHNA survey, Town Hall and Focus group all identified a need for more specialists to be available locally so residents don’t have to leave town for specialty care. Includes expanding the number of existing specialty clinics as well as addition of new specialists.

Design/Print Communications pieces  
$2,000 |
| | | | • Explore expanded service hours/additional | | |
- Explore other funding/grant opportunities for alternative services.
Priority Area 6: Build community knowledge and awareness about existing healthcare services available from the hospital – the CHNA identified that many in the community aren’t aware of all the services available or brought into the community by the hospital that deters people from leaving the county for the same services.

Priority Area 3: Poverty – the CHNA, Town Hall and Focus groups identified the high poverty level of the county as having an impact on community health. We did not include this in the implementation plan because the hospital cannot impact the poverty level of the citizens but we do our part by providing medical services and partnering with others to address the social issues for this demographic of our population.

Priority Area 5: Rural 911 Mapping Updates Needed – the Town Hall meeting identified concerns about the E-911 mapping in the county and its impact on area ambulances being able to find rural residences. We did meet with the county sheriff regarding this concern. The facts are that new maps have been developed and created and updates are sent to the GPS provider. According to the sheriff, the E-911 mapping is not a cause for ambulance not to find a residence but that issues may occur when the ambulance districts overlap and the 911 call goes to the closest service before being sent to the hospital service which may result in a 5 minute delay. He stressed that if anyone lives in these areas, they should request Mercy ambulance when making the 911 call and it will be immediately dispatched. We did not include this in the implementation plan because we don’t have control over the E-911 mapping service but the hospital will work with law enforcement to communicate the above information.

Priority Area 9: Department of Human Services (DHS) presence in Appanoose County – the town hall meeting identified that no longer having a DHS office in Centerville negatively impacts the health of the community. As the hospital has no control of this state managed agency, who eliminated the office due to cutbacks several years ago, we did not include it in our implementation plan.

Approved & Adopted by: Mercy Medical Center – Centerville
