Face Shield Instructions
MercyOne Central Iowa

April 2, 2020

1. Clean after each patient encounter using the process.

2. If shield becomes damaged or no longer offers protection, bring your PPE to the PPE Depot for exchange.

Full Face Shield Disinfection

After removal

1. Put on clean gloves – obtain two disinfectant wipes.

2. Disinfect front (patient-facing) side of shield with EPA-approved disinfectant, non-bleach wipe. Allow for appropriate dwell time.

3. Turn shield over, use second wipe to disinfect the inside of shield and other areas, e.g. strap or ear loops with disinfect wipe, avoid foam area. Allow for appropriate dwell time.

4. If shield is streaked or has a cloudy film, clean mask with soft, damp (with water) cloth or use an alcohol pad.
