Enhancing Lives and Building Independence

2018 ACUTE REHABILITATION OUTCOMES

MercyOne Waterloo Rehabilitation has been providing compassionate, high-quality care since 1974. Our facility has also consistently met the requirements for accreditation by the Commission on Accreditation of Rehabilitation Facilities (CARF) for more than 35 years.

Using innovative medical rehabilitation techniques and state-of-the-art equipment and facilities, our team of skilled professionals works hand-in-hand with patients to build the skills they need to live as independently as possible. Together, we achieve positive outcomes every day—achieving results that speak for themselves.

Total Patients: 200
IMPROVEMENTS IN FUNCTIONAL INDEPENDENCE

We measure the gains our patients make from the time they are admitted to the time they are discharged. Patients are scored on 18 items using the Functional Independence Measure (FIM), a nationally recognized tool that tells us how much assistance the patient requires to perform activities involved in daily living. The higher the FIM score, the greater the patient’s functional ability.
