THE CHALLENGE
A 61 year old female who has had symptomatic chronic venous hypertension. Patient was treated with endovenous ablation several years ago. However, patient continued to be symptomatic.

THE SOLUTION
Patient was evaluated and treated conservatively. Patient had left lower extremity more symptomatic than the right. Patient subsequently had venogram with IVUS. Patient was noted to have venous outflow obstruction, May-Thurner Syndrome.

THE RESULTS
Treated with venous angioplasty and stent placement. Patient’s condition is improved and continues to have patent veins.

WHAT OUR PARTNERS ARE SAYING:

"I refer patients to the Vascular & Wound Center because they provide exceptional quality care. They offer prompt appointments and better healthcare outcomes for my patients. I recommend providers refer those with varicose veins, lymphedema, Peripheral vascular disease (PVD) / leg swelling, and edema to this wonderful team. My patients' lives are improved after receiving care at the Vascular & Wound Center. They are able to be more active and live functional lives."

Shumaila Masood, M.D., Mercy Family Clinic – Regency

"Mercy-North Iowa’s Vascular and Wound Center have been a part of multiple patient success stories; and it has been easy working alongside them in how I manage my patient’s care."

Joseph Behr, M.D., Mercy Family Clinic – Forest Park

"Mercy North Iowa’s Vascular and Wound center is an invaluable healthcare resource. My patients receive excellent care from knowledgeable and compassionate professionals who improve people’s quality of life."

Jean Eichmeier, PA., Mercy Family Clinic – Forest Park
