

# Cardiovascular Clinical Research Trials

In order to provide access to the latest treatment advances, MercyOne Iowa Heart Center is involved with many clinical research studies. Clinical trials may involve investigational drugs or devices not currently available as part of patient care. Clinical research helps scientists and physicians answer questions about human health and develop future care protocols. Patients should ask their health care provider about clinical trials appropriate for their situation. Below is a listing of the clinical trials MercyOne Iowa Heart Center is participating in.

**Please contact us at (515) 633-3842 for current trial status and more information.**
